

8 reasons why

choose **SUNGROW**

SUNGROW
Clean power for all

sales@energynat.co.uk

1 Top performance

Sungrow is the only supplier of inverters that has achieved a 100% creditworthiness rating in the bankability ranking, and four times in a row! This means that banks are willing to provide loans for investments involving the brand's products. On the other hand, the company's credibility and financial stability is a guarantee of efficient handling of any potential complaints.

2 A brand to trust

The efficiency of Sungrow inverters today is no less than 99%. Such an impressive result has made Sungrow equipment hugely popular around the world. Today, the brand's high-performance inverters are successfully used in more than 150 countries, and are particularly popular in the business segment.

3 One of the companies with the best know-how on the market

Sungrow is one of the PV companies with the greatest know-how in the world today. The manufacturer founded its business more than 25 years ago. Such a long presence in the photovoltaic world, has enabled the company to develop the largest photovoltaic inverter R&D team, making Sungrow one of the companies producing the most technologically advanced inverters.

4 Smart management

Since day one, Sungrow has focused on innovation. For this reason, Sungrow's portfolio also includes inverters with smart management functions, namely smart I-V curve scanning, 24-hour real-time monitoring, and remote software updates.

5 One of the three most popular inverter manufacturers in the world

Sungrow inverters are among the most widely used in the world. They are also highly regarded in Poland – especially in the C&I segment and in the PV farm segment. They have been praised by installers, designers and users alike. All of this is due to their reliability, as well as their compact size and intuitive operation.

6 High yields

Thanks to advanced technologies and an innovative approach to the proposed solutions, the company provides equipment that makes it possible to achieve very high yields. Sungrow inverters are mostly compatible with bifacial modules, and have built-in PID inversion, lower starting voltage, and a wider MPPT voltage range.

7 Innovation

Since the outset, Sungrow has focused on technology development. It currently has a professional R&D team which has now enabled it to play a part in the implementation of more than twenty major scientific and technological programs. Sungrow has also developed a number of proprietary key technologies for even more efficient and safer use of solar energy.

8 Modern design and aesthetics

Every Sungrow inverter is compact and of aesthetic appearance. No matter which inverter model you choose, you can be sure that it will be made with care and attention to the smallest details. Its modern design will be particularly suitable for modern houses and will appeal to those who value minimalism and quality workmanship.
